ANNUAL REPORT

BY THE

ORDINARY MANAGERS

OF THE

ROYAL EDINBURGH ASYLUM FOR THE INSANE FOR THE YEAR ENDING 31st DECEMBER 1890.

Presented to the Statutory Meeting of the Corporation, held within the City Chambers, Edinburgh, on Monday, 23d February 1891.

The daily average number of patients in all departments of the Royal Asylum during the year 1890 was 819, being a decrease of 5 on the average daily number for the previous year, distributed as follows:—

		1889.	1890.	Increase.	Decrease.
1.	Patients in East House, Craig				
	House, and Myreside, .	127	132	5	0
2.	Intermediate Patients—West				
	House,	132	127	0	5
3.	Private patients in West House				
	at lowest rate of board, .	61	62	1	0
4.	Pauper patients in West House,	504	498	0	6
	-	024	070		4 4
	_	824	819	6	11

The Account of the Treasurer's intromissions is herewith submitted:—

The Charge amounting to	•	•	•	•	L.57,149	5	9

		CONTRACTOR OF THE PARTY OF

The above surplus from the East House is smaller than the surplus for the year 1889 by L.249 6s. 3d., while the deficiency from the West House exceeds the deficiency for the year 1889 by L.197 3s. 11d.

The cost of maintenance of pauper patients per head for the year 1890 was L.31 9s. 9d., being 10s. 3d. in excess of the mean rate of board charged for them. There has thus been a loss on the pauper patients of about L.287. The Managers have had under their serious consideration the propriety of raising the rate of board for these patients, but have come to the conclusion that it is unnecessary to make any immediate change. The rate will therefore remain at L.31 for the current year.

From the State of Debt annexed to the Treasurer's Account, it appears that the liabilities primarily affecting the West House now amount to L.37,202 16s. There is also a debt of L.1800 primarily affecting the East House and Craig House.

The surplus revenue from the East House has, as during previous years, been expended on the new buildings.

In the Report for the year 1889 it was recorded that tenders had been accepted for the erection of the new Asylum at Craig House, amounting to L.65,494 6s. 5d. This sum is exclusive of cost of boundary walls, heating apparatus, water supply, drainage, painting, architect's and surveyor's fees, and many incidental

expenses which are inseparable from so great an undertaking, and which will probably run up the cost to over L.70,000. During the year 1890 the sum of L.15,201 12s. was expended on the new buildings, including the sum of L.800 paid for a servitude over the ground opposite the entrance gate, to prevent the erection of lofty buildings there. Of the above expenditure, L.3205 0s. 7d. was covered by the surplus revenue from the East House above referred to, the balance being met out of the reserved funds available for building purposes, which have been reduced from about L.17,700, at which they stood at the commencement of the year, to about Assuming that during the current year the same sum will be expended on buildings as during last year, and that the surplus revenue will be the same, the Managers calculate that to enable them to carry on the work they will have before the close of the year to borrow the sum of L.6300. With this prospect they have already contracted loans to the amount of L.1800, as above stated, which is a primary charge on the East House and Craig House.

The Managers have great satisfaction in being able to report that on 16th July 1890 the commemoration stone of New Craig House was laid with becoming ceremony by the Earl of Stair, Senior Deputy-Governor of the Asylum, in presence of a large and representative body of spectators. The foundations and the first courses of masonry had previously been laid, and the work has been pushed forward with all possible despatch consistent with good workmanship. The south-east detached villa has now been nearly completed, and will be ready for occupation in the beginning of summer, while more than one-half of the main building has been built and roofed in, the work in all respects being of an unexceptionable kind. The Managers have made a satisfactory arrangement with the Edinburgh and District Water Trustees for a main pipe to supply the new buildings with water, and they are at present in course of completing an agreement with the Municipal Authorities for a junction of the Craig House drains with the city sewerage system.

The Asylum was inspected by the Commissioners in Lunacy on

25th, 26th, and 27th February 1890, and again on 17th, 18th, and 19th June 1890. The Commissioners on both occasions recorded their satisfaction with the condition of the patients, the care and consideration bestowed by the officials, and the excellent order found everywhere. On the first of these visits Sir Arthur Mitchell and Dr Fraser report—"In visiting this Asylum it is impossible "not to be impressed with the way in which the medical function "of superintendence pervades the whole management and leads "both to the cure of the curable and to the comfort and well-"being of the incurable. This refers equally to pauper and "private patients, and equally to measures which involve an outlay "of money and to those which involve an outlay of time and Prolonged expensive feeding with a view to bring "about a recovery is as freely bestowed on a pauper as on a "private patient. In several forms of insanity great trust is "placed in good feeding, and the results of treatment appear to "justify that trust. Eggs and milk are much used. During 1889 "16,324 dozens of eggs and 46,981 gallons of milk were supplied "to the Asylum. The meal, flour, butter, cheese, and tea which "are used in the Asylum were examined, and were regarded as of "excellent quality."

On the occasion of the second of the Commissioners' visits, Dr Sibbald reports—" Everything that was seen during the visit bore "testimony to the remarkable ability which distinguishes the "management of the Asylum. The condition of the patients was "such as could only be attained by vigilant study of the nature of "every case, and by a constant effort to place every patient in the "circumstances most likely to conduce to his or her improvement." In regard to New Craig House, Dr Sibbald further reports—"The "building of the New Asylum for private patients on the Craig "House estate is making rapid progress, and if any doubt existed "as to the suitability of the site for such an Institution, this has "been removed since the upper part of the hill has been acquired by the Managers of the Asylum. It is difficult indeed to con"ceive of a site which would present greater advantages. Proximity to a large city, security against being overlooked, healthy

"position, beautiful surroundings, and the command of varied and extensive walks within the Asylum grounds, are advantages not often met with in such favourable combination."

The Managers have again to express their obligations to Dr Clouston, the energetic Physician-Superintendent of the Asylum, and to the Assistant Physicians, the Chaplain, Matrons, Steward, and other officials, for the zeal and devotion which they have exhibited during the past year in furthering the interests of the Institution and the welfare of the patients committed to their charge.

It is with sincere sorrow that the Managers have to record the loss which they have sustained during the past year through the death of Sir James Gowans, the Dean of Guild, who had for several years discharged the duties of an Ordinary Manager with much benefit to the Institution.

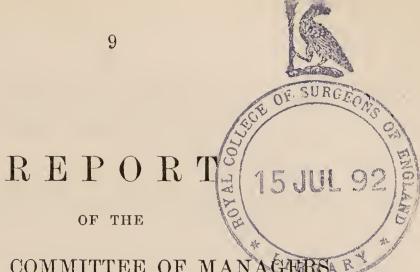

The Managers herewith as usual present the Report of the Committee for managing the Charity Fund and the Bevan Fund, from which it will be seen that during the past year the boards of 31 patients have been to a greater or less extent paid through the operation of the Charity Fund, and 45 through that of the Bevan Fund.

The Managers feel that, looking to the heavy claims upon their resources in connection with New Craig House, it would be injudicious to make any further grant towards the Charity Fund at present.

As administrators of what must ever be regarded as a Charitable Institution, the Managers feel that they cannot do better than conclude their remarks with the following quotation from the Report of Commissioner Sibbald on the occasion of his last official visit before referred to:—"The Asylum continues to perform a "charitable function of a very useful character in the provision it "makes for private patients at low rates of board. Such patients "can only be satisfactorily provided for in Institutions of the class "of the Royal Edinburgh Asylum, and in the supplying of such "accommodation at unremunerative rates of board the Asylum

"renders an important service to the community. To a very large "number of families of small means the cost of keeping a patient "in an Asylum even at a moderate rate is, however, a heavy "burden. The aid which the Managers are able to contribute in "many instances from the Charity Fund of the Asylum and from "the Bevan Fund is therefore of the most beneficent kind."

JA. ARTHUR CRICHTON,
Chairman of the Board of Ordinary Managers.

CHARITY COMMITTEE OF MANAGERS

OF THE

ROYAL EDINBURGH ASYLUM FOR THE INSANE

FOR YEAR ENDING 31st DECEMBER 1890.

The Account of the Treasurer's Intromissions we Fund is herewith submitted:—	ith the (Char	rity
The Charge amounting to	L.327	14	10
The Discharge to			
And the Balance due to Treasurer	L.143	13	2
The Fund, after deducting the above Balance, a	mounts		
to	L.9,106	6	10
For the year ending 31st December 1889, the			
Fund amounted to	9,049	10	5
Showing an Increase of .	56	16	5
The Ordinary Income on invested moneys du	aring th	e y	ear
was	L.326	19	10
The Ordinary Expenditure was	270	18	5
Showing excess of Income over Expenditure of	L.56	1	5
	No. of Association Confession Con		

This surplus has been applied towards the liquidation of the balance against the Fund at the commencement of the year occasioned through the discontinuance of the grant which had for some years been made towards the Fund out of the ordinary revenue of the Corporation.

The number of patients relieved during the year was 31, and the number on the roll at the close of the year, 26.

Along with the Account of the Charity Fund, the Committee beg leave to submit the Account of the Treasurer's Intromissions with the Bevan Trust Fund. From this account, it will be seen that the income of the Fund, including a payment of L.300 from Mrs Bevan's Trustees to account of the revenue derived from residue in their hands, amounted to L.508 3s. 5d., to which was added the balance from last year, L.4 0s. 7d., amounting together to L.512 4s., while the sum of L.533 1s. 8d. was expended in supplementing the boards of 45 patients. The Committee have to report that a further sum of L.1000 was received from Mrs Bevan's Testamentary Trustees to account of capital, the amount of which invested in the name of the Managers of the Asylum as trustees for the Fund is at present L.6,600 sterling.

The number of patients on the roll at the close of the year was 38.

(Signed) A. CRUM BROWN, Convener.

PHYSICIAN-SUPERINTENDENT'S ANNUAL REPORT

For the Year 1890.

I have the honour to submit the following Report of the Royal Edinburgh Asylum for the year 1890.

In the beginning of the year the number of patients was 824, General Statisand on the 31st of December it was 821 (including 5 on probatics. tion).

The admissions were 332, of whom 155 were men, and 177 women.

The total number of patients under treatment was therefore 1156.

The discharges were 226, of whom 106 were men, and 110 women.

The number of those who died was 109, of whom 64 were men, and 45 women.

The average number of patients resident during the year was 820, of whom 401 were men and 419 women.

ADMISSIONS.

The number of admissions (332) was just about the average Average. (335) of the previous five years. The private patients admitted Private Patients were 77 in number, this being 10 less than our average for the few. previous five years. We had to refuse admission to a large num- Many refused ber of patients of all classes, particularly to those of the richer admission. class, through want of room, and there is no doubt that the fact of its being generally known to the medical profession that we are apt to be full makes them often apply elsewhere to save time in

We should admit 100 private patients of all classes.

urgent cases. In the year 1876, when we opened the two new wings at the East House, and so refused no applications, the number of private patients admitted was 125, or nearly double the numbers of last year and this, during both of which we have been particularly full. Perhaps 125 admissions of private patients would be too high an average, but we should certainly be able to admit over 100 each year, if we are to supply the legitimate requirements of the city and elsewhere. I especially regret when we have to refuse cases at the lower rates of board, though such patients can now be received at many of the other Scotch Asylums in sufficient numbers for the wants of the country.

average.

ing pace with the population. Edinburgh gets saner.

The number of rate-paid admissions was 255, which is only 7 above the average for the past five years, and a number which has often in previous years been exceeded. It is a fact which does not tend to bear out the popular ideas as to the rapid increase of Pauper patients' mental disease in recent years, that the yearly production of pauper lunacy in our district (Edinburgh, Leith, and Portobello) has scarcely risen appreciably during the past fifteen years. that period into periods of five years, the average number for 1876-80 was 245; for 1881-85 it was 243; and for 1886-90 it was Yearly produc-tion of pauper lunacy not keep- not keeping pace with the growth of the population. We seem to The production of rate-supported insanity is in fact with us be a saner people in Edinburgh than we were fifteen years ago, for our population has increased in that time about 30 per cent., while our annual production of pauper insanity is only 3.7 per cent. more at the end of that time than it was at the beginning. Those numbers refer to the new cases occurring every year. we look at the total number chargeable, this including all the patients in the Asylum, together with those in the lunatic wards of poorhouses, and those boarded out, it was 862 on 1st January 1891, against 585 on 1st January 1875. This is an increase of 47.4 per cent. in the whole mass of pauper lunacy, as compared with an increase of a probable 30 per cent. in the population in the fifteen years, or at the rate of 15.5 every five years, as compared with 10 per cent. of increase of our population. annual production of new cases of the disease scarcely increasing, while the total numbers steadily grow, is a fact which means

that there is an accumulation of uncured cases which have continued to live on in an incurable condition. This continuous increase or silting up must stop however in time if the new pro- Uncured cases live on and acduction does not increase year by year, for, however well cared cumulate. for, a chronic lunatic must die sometime. His chances of life A chronic lunatic is mortal. may be improved by care and good treatment, but they cannot extend beyond a certain time. This process of diminishing accumulation of incurable cases has clearly begun, for if we take the past five years 1886-90, we find that the total numbers of pauper lunatics chargeable to the urban portion of Midlothian have increased from 775 to 862, or only 87 in all, an accumulation during the five years of 11.2 per cent. against an estimated increase of 10 per cent. in the number of the general population. During the previous ten years 1876-85 the increase by accumula- Accumulation tion had been 32.5 per cent., or a rate of a half more than during abate. the last five years 1886-91. Both of those facts don't support any pessimistic theory of the modern increase of lunacy. The fact that St Cuthbert's, our fastest-growing parish, paid considerably less for the support of its lunacy last year than five years ago tends in the same direction.

An examination into the character of the cases admitted shows Character of at least two marked facts. The one is that the average general health and condition of the patients were lower this year than usual. We had to enter 50 as having been in "Bad Health and Many in exvery Exhausted Condition," that is in imminent risk of death, when they came in this year, as compared with an average of 38 in that condition during the previous 15 years. That there is a tendency year by year to send more cases to us in this condition is evident, for during the five years 1875-79 the average number so sent was only 29, as compared with the average of 42 during the past five years (1885-89), and over 50 this year. These sta- steady deteriortistics merely confirm one's daily observation as to the state of ation in bodily condition of adthe individual cases who are admitted. The number of those in missions. really good bodily health and condition is also diminishing. We had only 72 such this year against an average of 99 during the previous five years, and of 109 during the five years 1875-79.

The other prominent fact about the admissions of the year was

A Melancholic year.

Melancholia is the most common mental disease out of Asylums.

Reasons why.

Mania means an Asylum.

In the two chief divisions which we made of the mental condition of patients-first, those who were unduly and morbidly depressed (Melancholia) on the one hand; and, second, those who were on the other unduly and morbidly elevated and excited (Mania), we commonly find the cases of Mania greatly to predominate. During the five previous years we have admitted 847 cases of Mania to 617 of Melancholia, or 37 per cent. more In no year in the history of the institution until cases of Mania. this have the cases of depression been as numerous as those of exaltation; while this year we had 140 cases of Melancholia and only 134 cases of Mania. Not that I believe depression to be less common as a mental affliction of humanity than morbid elevation and maniacal excitement, if we take all those afflicted into account, whether in Asylums or in the outside world. The contrary is in my experience the case. There is in my experience more morbid depression than morbid exaltation with excitement in the world out of Asylums that is never sent to institutions for treatment, and does not need to be so sent. It is a far more manageable condition at home than Mania. Morbid depression is the sort of mental disturbance nearest sanity, the reasoning power being less affected, the power of self-control less disturbed, and the In fact morbid depression is not regarded conduct more normal. as insanity at all by the public till it becomes suicidal or violent. Therefore the subjects of it, be they poor or rich, are allowed in larger numbers to remain at home, and are treated there until the symptoms get very bad, or the patient becomes markedly suicidal. The patients who suffer from maniacal states, on the other hand, are commonly difficult to manage, annoy the neighbours or the public, or come under the notice of the police. Their morbidness of mind is commonly incompatible with home life, and therefore whether poor or rich they must be sent to institutions like ours for care and treatment. When in any year, for the first time in the history of the institution, the numbers of depressed patients predominate over those of the maniacal, one naturally thinks there must have been some distinct causes operating among those prone to mental upset in the direction of lowered nervous action and vitality, and therefore tending towards mental depression. For it

may be said generally that the previous existence of such weak Why people bevitality, as is shown in thinness of body, lassitude, want of mental lic instead of energy, indigestion, a low nervous "tone" and general "lowering" elevated. of the system, tends towards a morbidly depressed condition, if the mental part of the brain becomes affected. I have come to the conclusion, from my observation generally, without perhaps very definite or statistical data, that the year 1890 was, with us vital conditions in Edinburgh at least, one depressing in its conditions to the of 1890 lowering to the to nervous tone. nervous tone, and lowering generally to human vitality. Whether it was the influenza in the early part of the year that perceptibly Was the Influenlowered human vitality as a whole, or whether the prevalence of result? the influenza merely showed that European humanity was in a lowered state of vitality, so being a fit nidus for the influenza germs to propagate in, or whether it was the sunless, summerless Assunless sumgeneral character of the year here I cannot tell. We know that burgh. our mortality rate in Edinburgh in 1890 was 9 per cent. over the average rate of the five previous years. I distinctly connect the influenza in some way with the unprecedented number of melan-Influenza and cholic patients sent here this year. Moreover, my own experience, Melancholia. and that of many of my medical brethren, to whom I have spoken, goes to show that a very considerable number of the people who had the influenza felt great mental depression both Influenza caused during their attacks and after the attack had passed off often for depression of spirits. This latter experience was so exceedingly common, that there must have been something in it. Of the thousands who were simply depressed in mind, if a few with a tendency to insanity passed into a further stage, and became insane, it would explain our numbers. All competent observers say that the worst of the symptoms in the bad cases of influenza were nervous. That Influenza a nerwas Dr Brakenridge's conclusion in his paper at the Medico-Chirurgical Society here, and almost all the speakers at that meeting agreed with him. But the subsequent lowered nervous tone, left as an evil residuum long after the disease had been recovered from, has not had the attention paid to it that it deserves. I believe the epidemic of influenza of 1889-90 left the The world left European world's nerves and spirits in a far worse state than it duller by the Influenza. found them, and that they scarcely yet have recovered their nor-

mal tone. I shall have something to say as to the direct effects of influenza as a cause of death among our community, when I come to speak of the serious epidemic of the disease that affected the Asylum population, sane and insane, during the early months of the year. The influenza poison seemed to burn up the nervous energy, and leave the brain unable in some cases to recuperate.

Influenza not often "assigned cause."

The influenza was assigned in our official papers as a cause for the attack of Melancholia in only a few cases, but a great many of the other patients admitted had suffered from the disease, and I was clearly able in many cases to trace the origin of their malady to it.

early in the year.

Our admissions were not more numerous as a whole during the More admissions year than usual, but the early months of the year sent us many more cases than the later months. From January to May inclusive the average monthly admission rate was 29.6, while during the latter seven months it was only 26:3, and it declined as the year drew to a close, so that the rate for the last three months, October to December inclusive, was only 20.3.

Only seven of the admissions were of the entirely hopeless class of idiots or congenital imbeciles, but that does not represent at all the number of which the predisposing cause was hereditary Those human beings who show mental deficiency at birth, or immediately thereafter, may be taken as the strongest examples of the effects of a bad nervous heredity. them no chance of a mental life at all in any proper shape from the beginning. Next we come to the cases born in a normal condition, and passing through their period of greatest body growth up to fifteen or so in a normal state of mind, but who during adolescence, the next period of the real development of all the higher mental and moral qualities, from 15 to 25, but chiefly from 18 to 25, become subject to mental ailments, as well as to all sorts of nervous maladies. Of such cases of "adolescent insanity" we had 56, or about one-sixth of all our admissions for the year. The meaning of such cases is that in them nature, through an unfavourable nervous heredity, which up to that age had been a mere hidden potentiality, had failed in the development process of building up sound, resistive, normal brains, that could manifest

Developmental Insanity.

"Adolescent Insanity

sound, stable minds. The brain scarcely grows in bulk after How the brain seventeen, but for eight years more it develops all sorts of essen-bulk and then tial energies and qualities. It grows in quality, not in bulk. regards mental disease this period is of the profoundest importance, for it is then that hereditary qualities come out most markedly. Wehope that bye-and-bye our knowledge will be greatly extended, as compared with what it is now in regard to the signs that would indicate danger then, and in regard to measures of pre- We may be able caution that we should then take to prevent the most terrible of predict and all the catastrophies that can happen to a youth or maiden, viz., prevent. an attack of mental disease on the threshold of life.

Mental disease does not stand alone as a danger to adolescence.

develops in

It is found to be connected hereditarily and otherwise with all sorts of other nervous affections, such as epilepsy, convulsions, and Insanity one of hysteria, and even with such nervous ailments as asthma, sick many nervous dangers during headaches, and even with a tendency to consumption. There is a vast field of study in our department of Medicine here, not in Asylums only or chiefly, but in a more comprehensive way, where family practitioners of Medicine can get at the facts better than specialists can. Humanity must benefit in the long run by every increase of our knowledge in regard to family histories of disease Knowledge is and the relationship of one disease to another in families. accurate building up of facts is literally a painful process to the enquirer and to those enquired of, but it must certainly be gone through before science can give such boons to humanity as accurate generalizations from innumerable facts leading to prevention or to cure. As some of the chief hopes of the future for modern life and civilisation depend on education, and education must surely tend to a development of all the powers and organs of body and mind, and must strengthen their weak points during the period of adolescence, the dangers of that period of life especially concern Medical knowsociety in those days of universal and compulsory education. counteract evil brain heredity, if that be possible, would be one deeply concerns of its very highest triumphs, for without sound and resistive brain many kinds of education are simply a danger, ending in the mental death of incurable insanity. Therefore the whole subject of the

physiological and medical study of the brain during the develop-

mental or education period concerns society greatly.

development.

Health.

ledge about

DISCHARGES.

Recovery-rate average.

The number of recoveries was 126, or 38 per cent. on the admissions, this being about 3 per cent. under our average. In addition 83 cases were discharged relieved of the worst symptoms of their disease, making with the recoveries a total of 63 per cent. of real improvement for the year. It is always a matter of medical opinion, whether a patient is quite "recovered" or merely improved so far in mind as to have a reasonable chance of doing There are many patients who leave Asylums, well at home. about whom two medical men would have different opinions, as to whether they were "recovered" or merely "relieved." standard of sanity is not yet an absolute and definite one. The temperament of the man who judges comes in.

Recovery comes soon, if it comes at all.

Only 4 patients recovered after more than three years' residence, while 114 out of the 126, or 90 per cent., recovered within the first year of residence.

Some patients want to stay on.

"Expulsive" Commissioners needed.

"A good lu-natic."

among the insane.

It is a fact that in Asylums very many patients are loud in their demands to be discharged, but we have not a few who commonly in silence desire to be kept here. In talking with a shrewd patient lately, when I explained to him that one function of the Commissioners was to see that all patients were discharged who wanted to go and were fit, he said, "Yes, that's all very well, but it seems to me you need another set of 'expulsive Commissioners,' whose duty it should be to turn out those who don't ask to leave, but are quite fit to go. It seems to me that it is the unfittest here that are urgent to go, while the reasonable sort of quiet people have a good time, get lazy, and never ask to go away, and they ought to be turned out by force, to make room for a lot of troublesome people in the world, who should be here!" It was another such person who, hearing a patient ask me for a "certificate" to get away, said, "Doctor, I want a 'certificate' too; will you give me one to say that I have been a good lunatic?" After a time of residence no doubt the Asylum becomes a home to many, and the cat-like "homing" tendency is acquired by very many patients, who can't explain in words why they wish to stay. One old lady admitted last year was at first always wanting to leave, and crying out about the cruelty of being detained she lives in an open ward, and never asks to get away, but on the

"Homing"

contrary can scarcely be got to go out for a walk in case she should wander out at the gate, and might not find her way in She has so far forgotten the character of the place she is in that lately when another patient was making a little noise, she came to the matron and whispered that if that lady went on so she feared "it would be necessary to send her to the Asylum, poor thing!"

The opposite animal tendency to wander without being able to "Planomania." assign any reason for it affects other patients. It is a mere unreasoning instinct to rove, without aim, and without purpose as to the direction taken. This is rather common in certain forms of recent insanity. I have heard of many such cases in the Colonies, simply wandering out into the woods and over the mountains and going straight forward without aim till they sank from exhaustion.

DEATHS.

The number of deaths (109) was the largest in any one year in Largest mortalthe history of the institution, and the percentage of deaths, ity on record. whether calculated on the average numbers resident (13:3), or on the total numbers under treatment (9.4), was also the highest on record. This is a fact demanding the most careful medical scrutiny. The mortality above our average rate occurred entirely in All the extra the first five months of the year, from January to May inclusive, deaths in January to May. during which time 63 of the 109 deaths took place. Especially the month of February was a fatal one, for 18 deaths occurred then, or about three times our average monthly death-rate. our death-rate this year been the average one of 6.6 per cent. on the total numbers under treatment, the number of deaths would have been 76, so that we had 33 too many, or 43.3 per cent. over our average. It was no doubt a sickly year in Edinburgh, whose death-rate, as we have seen, was considerably higher than the average of the five previous years. Any general conditions adverse to health and life would operate much more strongly among an invalid population like ours than among the general community. But such general causes would not account for our enormous increase of mortality.

The obvious cause for a very considerable proportion of our Our Epidemic of undue death-rate was the epidemic of influenza, which occurred Influenza.

here from the second week in December 1889 till the end of

January 1890, with a few sporadic cases afterwards. We had an admirable opportunity of studying it, for all our patients were living under the same conditions of life, and we could observe them very closely. One of the best and most quoted accounts of the epidemic was given by our two assistant-physicians, Drs Robertson and Elkins. Up to the time they published their account in The British Medical Journal of February 1st, 1890, 94 patients and 52 officials had taken the disease. This was a proportion of $10\frac{1}{2}$ per cent. of all our patients, and no less than per cent. of all our patients, and $31\frac{1}{3}$ per cent. of all our resident staff. The mortality from it was very different among the sane and the insane, however. our staff affected the staff died, but 10 of the patients died of its immediate and direct effects, and other 9 died during the year of its subsequent and more indirect effects. Thus 21 per cent. of the patients who took influenza died of its direct or indirect effects. Nothing could show better the vast difference between the previous general health condition and power to resist disease of the insane as a whole compared with the sane. Our community of patients is in fact invalid, and when it becomes affected by disease, it cannot resist it and recover, but dies in large numbers. The most decided and characteristic of all the forms of insanity with organic brain disease that are found in Asylum patients is general paralysis, and of the 30 cases which we had in the house in January, 10 took the disease, 6 of those dying of its direct effects, and 2 afterwards of its indirect effects-

Causes of death

worse in mind while suffering from the disease and during convalescence, than they had been before they were attacked, some of them being permanently worsened. In most of the fatal cases the in Influenza. lungs were affected by pneumonia, pleurisy or bronchitis, and with pericarditis coming on secondarily. Five of the cases who died of indirect effects either developed consumption, or having it pre-

a mortality of over one-fourth of all our General Paralytics.

The nervous symptoms of the influenza were especially marked

in our patients, and every one of them, except perhaps two, were

viously, got worse and died soon.

The very interesting and important question of why the staff, sane and strong as they were, took the disease in nearly three larger proportion to Nos. than times the proportion of the patients—10.5 per cent. against 30.3 per cent. of the total numbers of each class—is not one to be dog-

Why was the sane affected in insane?

matised about in such a report as this, and is one about which different opinions have been expressed; but my own belief is that it was owing to the staff going into town and going more about Staff breathed generally, and so breathing the infection in the open air at different places more, while the patients were necessarily obliged to breathe a more localised air.

Nineteen of the 33 deaths over our average number being thus due to influenza, there were other two deaths due to cerebrospinal meningitis, sent here by mistake when delirious. maining 12 must be chiefly attributed to the weak and exhausted condition of so many patients on admission, to which I have The effect of this is best shown by the large number (19) who died within the first month of residence. Forty-seven Large number of deaths, or 43 per cent. of the whole, took place within 12 months admission. after admission. Most of the cases who die within that time have come labouring under most serious or fatal diseases. of the deaths were due to diseases of the nervous system, chiefly This is the largest number on record from this Death-rate from brain diseases. cause. Only 58 had ever before been attributed to diseases of the Nervous Diseases unprecenervous system. The number who died from consumption was dented. very low, and much below our average.

GENERAL HISTORY OF THE INSTITUTION.

The building of New Craig House has progressed continuously New Craig House and rapidly during the year. The dining and kitchen block pro- half built. jecting north from the centre is roofed, and the retreating wards for ladies are ready for roofing; while the south-east villaone of the six detached houses—is almost plastered, and will probably be ready for occupation in midsummer. It is a pic- The new S.-E. turesque and commodious house that will accommodate from villa "Sunny-side." 12 to 15 patients. It stands highest of all our new buildings, its public rooms facing south, looking towards the Pentland Hills, and with charming views of Edinburgh, the sea, and the surrounding country in every direction. It is a complete house in itself, with its own dining-room and kitchen, and will be worked as Old Craig House is administered, under the charge of a lady matron and companion to the patients. It is not too far for the patients to go to the main house or Old Craig House for

amusements and to see their friends. Its red stone with yellow freestone dressings, and its steep green roof, are very effective among the foliage of the trees.

Our first public ceremonial.

The great function of laying the Commemoration Stone of New Craig House by the Earl of Stair, K.T., our Senior Deputy-Governor, on the 16th July, must be considered to have been a notable success. We have never come before our citizens in a public ceremonial way on any other occasion, but the response to the invitation of the Managers was most gratifying, as showing the interest taken in the institution by all classes of our citizens. No more representative company could have been assembled together for any purpose. Many of the heads of the great professions,

A great gathering.

An educative effect.

A grateful act.

Usual routine goes on.

good representatives of the social, the official, and the commercial life of our city, showed their interest in this important charitable undertaking by their presence. It is well that mental disease and all that relates to its treatment should be regarded in the same light as any other human ailment or misfortune. And now-adays no undertaking for the public good can be put on too broad a basis of public sentiment. Ours is no class institu-Such a meeting of 140 representative men and women tends powerfully to educate the whole public mind against those unreasonable and hurtful prejudices about insanity that have been hitherto so prevalent, and so to take away its reproach. The day was distinctly a landmark in our history. The great importance of the New House from a Medical point of view was best shown by the large turn-out of the Medical profession both from Edinburgh and the neighbourhood, and especially by the fact that the majority of the Asylum Superintendents of Scotland honoured us with their presence. This mark of interest and comradeship on the part of my Asylum brethren was especially appreciated, and will always be gratefully remembered by me.

Our usual work and our usual amusements go on as two of the great curative agencies. I have reason to believe a spirit of kindness and forbearance prevails among our nursing staff. I thought this well illustrated when I was talking lately with our head hospital nurse about some very troublesome patients she had that were overtaxing, as I thought, herself and her staff. I said she would need another nurse in the ward, if these patients did not improve. She remarked, "I sometimes find a sixpence worth of

sweets worth another attendant." Another day a patient in this "Sixpence worth of sweets worth ward was making most unreasonable and utterly unfounded com- an attendant. plaints about the food, and the only reply the head nurse made was, "Oh! Doctor, some days here the hens all lay rotten eggs, Hens lay rotten and the cows all give sour milk." The law by which a man's subjective condition colours all his objective surroundings never fails to have such vivid illustrations with us.

Like the world outside the press is a great power and a great recreation to us. Our Morningside Mirror has completed its Our Mirror holds forty-fifth year of publication, and this year has by its veracious public. articles on "The Great Sea Serpent," its records of our balls and picnics, our cricket and lectures, and its new column of "Easy "Easy Jokes for the Scotch." Jokes for the Scotch," kept up the interest of its readers, who comprise our whole community and some of the outside world. It was a little disconcerting to the fame of the Mirror to have a How limited is widely read London Paper write me to ask if I knew anything of fame! a journal published somewhere in Scotland in an Asylum, and written by its patients? and to have an American Asylum Doctor send me a fledgling print of six months old, and say that he thought that this was the first paper printed in an Asylum in the world!

I can faithfully give unqualified praise to most of the staff. The Staff a good Their irksome duties are well done on the whole. Our head male attendant of the East House, Mr Gregory, celebrated the comple- Mr Gregory's tion of his 25 years' service by a trip to America, and we were all trip to America. glad to have him back again, and to see an account of his travels in the Mirror. The Board most properly showed its appreciation of his long and faithful service in a suitable way. He has picked up many American ideas certain to be useful to us at New Craig House when we get there.

A very important resolution was come to by the Medico-Psy-An authorised certificate for chological Association, a body chiefly composed of Asylum attendants. Physicians, at its meeting in Glasgow last August, in regard to attendants and nurses on the insane. This was to institute a scheme of examination and certification by the Association, the object being to raise the standard of qualification and to improve the professional status of our attendants in Asylums, and of mental nurses outside, authoritatively constituting them in this way a branch of the certificated nursing profession. I had long

Our Staff respond.

Exam. must be very practical.

of all.

advocated some such a scheme. It appears to have been successfully carried out in the M'Lean Asylum at Boston by Dr Coles. A number of our senior attendants and nurses—for they must have had two years' practical experience before they can be admitted to the examination—have announced their intention of going in for this certificate, and the Assistant-Physicians are to institute practical classes for their instruction. The examination will of course need to be an intensely practical one throughout, far more weight being given to the proofs of real ability in dealing with mental disease than to the mere answering of questions. great weekly organs of Medical opinion highly commend the scheme and wish it success, but they all agree that of all branches Mental nursing of nursing, Mental nursing is the most difficult, and needs the greatest and rarest combination of qualities, physical, mental, and A former Assistant-Physician here, Dr Hayes Newington, was the Secretary of the Committee that worked out the details of the scheme, and as such he had more to do with its being made a practical workable measure than any one else.

Officials will marry.

Dr Ezard resigned on his marriage with Mrs Hodgart—and we wish them both well: they were good officers—and Dr G. R. Wilson has come in as Junior with high recommendations; while Miss Mary Peter has succeeded Mrs Hodgart as Matron of Old Craig House.

Dr Barrett goes up.

Dr Barrett, our Pathologist, had his distinguished merits recognised by promotion to be Pathologist to the Royal Infirmary, and Dr W. Middlemass, B.Sc., succeeds him as our Pathologist, with this change of arrangement, that he is resident in the institution, and devotes his whole time to our work. He is doing good work in his department since he came, for which he had trained himself in Professor Rutherford's laboratory and on the Continent.

Very many thanks.

In conclusion, I have most warmly to thank the Managers for their ever thoughtful and kindly treatment of me, and for the earnest attention they always pay to every suggestion I make.

> T. S. CLOUSTON, M.D., F.R.C.P.E., Physician-Superintendent.

^{*} With reference to the distinction between "predisposing" and "exciting" causes, it must be understood that no single cause is enumerated as both predisposing and exciting in the case of any individual patient.

[†] The figures in the Total column represent the entire number of instances in which the several causes (either alone or in combination with others) were stated to have produced the mental disorder. The excess of the aggregate of such causes over the number of patients admitted is owing to combinations of causes.

REPORTS

OF THE

COMMISSIONERS IN LUNACY.

ROYAL EDINBURGH ASYLUM, 17th, 18th, and 19th June 1890.

There are 815 patients on the Registers of the Asylum. Their position is shown in detail in the following statement:—

·	Priv	rate.	Pau	Totals.		
	М.	F.	М.	F.		
Certificated Patients Resident	164	144	224	268	800	
Absent on Probation	5	3	0	0	8	
	169	147	224	268	808	
Voluntary Inmates	3	4	0	0	7	
Totals	172	151	224	268	815	

The number of private patients is the same as at the date of the preceding Entry. There is an increase of 2 in the number of pauper patients.

The following changes have taken place since the date of last visit:—

I. Among Certificated Patients—

	9	Pri	vate.	Pa	uper.	Totals.
		M.	F.	M.	F.	
	Admissions	12	11	40	39	102
	Discharges Recovered	0	4	10	14	28
	Discharges Unrecovered	5	1	15	12	33
	Deaths	6	6	18	10	40
II.	Among Voluntary Inmates-					
	Admissions		1	0	0	2
	Departures	1	0	0	0	1

Twenty-four of the deaths were due to diseases of the brain and nervous system. Only 4 were due to pulmonary diseases. The smallness of the number due to pulmonary diseases is an indication that the hygienic conditions in which the patients are placed are of a satisfactory character, and that the dietary is suitable and abundant. It is worthy of note, that 19 of the deaths were in recent cases, the patients having been admitted to the Asylum during either the present year or the year immediately preceding. In 12 cases the patients were over 60 years of age. In one case the death was the result of fracture of the spine occasioned by an attempt at suicide made before admission to the Asylum.

There are 61 entries in the Register of Restraint and Seclusion Forty of the entries refer to the use of seclusion in the treatment of 14 persons; 13 refer to the use of the polka or of gloves in the treatment of 2 persons on account of suicidal or homicidal attempts; and 8 refer to the use of the shower-bath as a tonic in a case of stupor. Two patients who escaped were absent over night before being brought back. Accidents to patients occurred in 2 cases, one involving fracture of the bones of the leg, and the other involving fracture of the ribs.

Everything that was seen during the visit bore testimony to the remarkable ability which distinguishes the management of the Asylum. The condition of the patients was such as could only be attained by a vigilant study of the nature of every case, and by a constant effort to place every patient in the circumstances most likely to conduce to his or her improvement. The conscientious care with which special consideration is given to the requirements of each individual was shown in every department of the institution, pauper as well as private, by the remarkable absence of signs of irritability or discontent.

All parts of the establishment were found in admirable order. As usual, efforts at still further improvement of the arrangements are being made. In the female hospital of the West House a larger room is being prepared for occupation instead of the present dining-room, which has been found too small. This will increase the efficiency of a section of the Asylum which is already of exceptional excellence.

The management of the hospital for men, under the charge of a female head nurse, continues to work well.

The building of the New Asylum for private patients on the Craig House estate is making rapid progress; and, if any doubt existed as to the suitability of the site for such an institution, this has been removed, since the upper part of the hill to the east has been acquired by the Managers of the Asylum. It is difficult indeed to conceive of a site which would present greater advantages. Proximity to a large city, security against being overlooked, healthy position, beautiful surroundings, and the command of varied and extensive walks within the Asylum grounds, are advantages not often met with in such favourable combination.

The Asylum continues to perform a charitable function of a very useful character in the provision it makes for private patients at low rates of board. Such patients can only be satisfactorily provided for in institutions of the class of the Royal Edinburgh Asylum; and in the supplying of such accommodation at unremunerative rates of board the Asylum renders an important service to the community. To a very large number of families of small means the cost of keeping a patient in an Asylum, even at a moderate cost, is, however, a heavy burden. The aid which the Managers are able to contribute in many instances from the Charity Fund of the Asylum and from the Bevan Fund is therefore of the most beneficent kind. There are in the Asylum at present 67 private patients at the rate of £28 10s. per annum, and 126 private patients at the rate of £42 per annum. the payment of these boards contributions are made from the Charity and Bevan Funds in the case of 63 patients. tributions are in sums varying from the whole rate of board down to a contribution of £10 per annum; and the total sum so contributed during the year 1889 was £848 18s. 2d.

The books and registers of the Asylum were examined, and were found regularly and correctly kept.

JOHN SIBBALD,

Commissioner in Lunacy.

ROYAL EDINBURGH ASYLUM, 13th, 14th, and 15th April 1891.

There are 835 patients at present on the Registers of the Asylum. The following statement shows their position:—

	Private.		Pauj	per.	
	M.	F.			TOTALS
Certificated Resident	173	154	241	253	821
Certificated Absent on Probation	4	3	0	0	7
Patients (Absent on Pass	0	1	0	0	1
On Register	177	158	241	253	829
Voluntary Inmates				0	6
Total Number on Registers	182	159	241	253	835

The statement shows that the number of private inmates has increased by 18, and the number of pauper inmates by 2. If all private patients, who have sought admission, could have been received, the increase of their number would have been much greater.

The changes which have taken place in the population of the Asylum since the date of last visit are as follows:—

		Priv	rate.	Pan	per.			
		M.	F.	M.	F.	TOTALS		
A	Admissions	38	28	97	106	269		
Among Certificated <	Discharges Recovered	16	6	26	56	104		
	Discharges Unrecovered	6	4	27	33	70		
Patients	Deaths	11	10	24	29	74		
Among	Admissions	5	0	0	0	5		
Voluntary \	Departures	3	1	0	0	4		
Inmates	Deaths	0	2	0	0	2		

Nearly half of the deaths were due to diseases of the nervous centres. Deaths from phthisis continue to be few—only 8 being registered as due to that cause.

In the cases of 63 of the 74 patients who died a post mortem examination was made. There is now a resident pathologist, and no opportunity is lost of advancing the knowledge of insanity by examination after death. This is not a new thing in the Asylum, but a step onwards has been taken, by the appointment of a resident pathologist. The records of pathological work in the Asylum.

lum have long been full, and they are constantly and diligently discussed and studied.

Indeed, no visit can be paid to the Asylum which does not leave a strong and most pleasant impression as to the character of the medical management. A patient coming to the Asylum has his condition as carefully and minutely studied as patients have who enter our large General Hospitals or Infirmaries, and whatever medicine can do to benefit him is done. Exercise out of doors, good food, warm clothing, comfortable beds, pleasant and cheerful surroundings, and a kindly forbearance, are as much a part of treatment in this Asylum as anywhere; but it cannot be visited without one being impressed with the attention which is bestowed on the strictly medical treatment of the patients. Separate Hospital, which has been so much commended, and which is being so widely copied, is an outcome of this feature of the management, which is due, of course, to the Physician-Superintendent; but it is right to add, that he is ably assisted in his clinical work, and in his researches generally, by his three assistants.

There has been an earnest effort to improve the attendants, by giving them instruction in their duties; and for this purpose a course of 15 lectures has recently been delivered—3 by Dr Clouston, and 12 by his assistants. This course of lectures was followed by more than 100 attendants, who received in addition practical instruction in the wards. Twenty-five of them, who have been 2 years in the service of the Asylum, are to go up immediately to be examined for the certificate recently instituted by the Medico-Psychological Association. Bad nurses may not be made good nurses by this instruction and training, but good nurses will almost certainly be improved.

There are 118 entries in the Register of Restraint and Seclusion, referring to the restraint of 9 persons, and the seclusion of 26. The number of patients who have escaped since last visit, and have been absent for at least one night before being brought back, is 15. Twelve accidents are recorded. These include a death from eating the ends of lucifer matches with a suicidal intent, and two attempts at suicide with no serious result. They also include several fractures of the bones of the arm and leg.

Asylum at Craig House. Indeed, it is hoped that one of the Separate Villas will be ready for occupation before the summer has ended. When the whole buildings are completed, they will constitute an Asylum for private patients which will have no equal anywhere, so far as the Reporter knows. The additional accommodation which it will afford will be immediately occupied, as applications for the admission of patients belonging to the higher class are increasingly numerous.

All parts of the Asylum were found in excellent order. The patients were remarkably free from excitement, and no complaint was made by any patient.

The Registers were examined, and were found, as usual, to be correctly and carefully kept. The Case Books were also examined, and were found to be kept in a most satisfactory manner.

ARTHUR MITCHELL,

Commissioner in Lunacy.
